Beyond Parochial Faith Apr 03 2020 Beyond Parochial Faith: A Catholic Confesses weaves the author's personal story of woundedness and healing with her spiritual evolution. While working through and growing from personal relationships, Clancy wrestles with large questions of life's meaning. Her spiritual transformation allows no denial of God's existence, but

her rational mind cannot accept the Christian Father/Son myth. She moves from parochial faith to faith informed by science, world religions, and the arguments of atheists. Clancy denounces what she calls sexist God-talk and espouses "secular spirituality," while also honoring Jesus and religious myths for being avenues to transcendence. Beyond Parochial Faith shows a deeply spiritual life independent of religion's dictates. "Nones," the Goddess, sexual assault, the #MeToo movement, and a gay priest play roles in this story. The author's questioning epitomizes Western spiritual evolution in the twenty-first century.

Fluorinated Coatings and Finishes Handbook Aug 27 2019 *Fluorinated Coatings and Finishes Handbook: The Definitive User's Guide, Second Edition*, addresses important, frequently posed questions by end-user design engineers, coaters, and coatings suppliers on fluorinated coatings and finishes, thus enabling them to achieve superior product qualities and shorter product and process development times. The book provides broad coverage of these fluorinated polymer coatings, including the best known PTFE, polytetrafluoroethylene, first trademarked as Teflon® and ePTFE (GoreTex®). Their inherent qualities of low surface tension, non-stick, low friction, high melting point, and chemical inertness make fluoropolymer coatings widely desirable across thousands of industrial and consumer applications, but these properties also make it difficult to convert fluoropolymers to coatings that have sufficient adhesion to the substrate to be protected. In this book, readers learn how fluoropolymer coatings are used and made, about their pigments and fillers, binders, dispersion processes, additives, and solvents. The book includes substrate preparation, coating properties, baking and curing processes, performance tests, applications, and health and safety. Provides a practical handbook that covers the theory and practice of fluorinated coatings, including the structure and properties of binders and how to get a non-stick coating to stick to the substrate. Covers liquid and powder fluorocoatings, their applications methods, curing and baking processes, and their commercial end uses. Presents detailed discussions of testing methods related to fluorocoatings, common coating defects, how they form, how to eliminate them, and the health and safety aspects of using and applying fluorocoatings. Includes substrate preparation, coating properties, baking and curing processes, performance tests, applications, and health and safety.
