Multifunction Peripherals for PCs Jun 22 2022 Multifunction devices combine the essentials of a fax machine, printer, scanner, and copier into one peripheral for small and home offices. As the market for this equipment grows, the need for skilled repair and maintenance increases. Unfortunately the service documentation supplied by the manufacturers is completely inadequate making the repair jobs even harder and more expensive. Marvin Hobbs teaches you how multifunction peripherals work in theory and in practice with lots of hands-on examples and important troubleshooting and repair tips you don't want to miss. This book fills a gap in the literature, and will be a welcome addition to the library of any technician or do-it-yourselfer. Written by a knowledgeable practitioner with inside industry information Fully covers the troubleshooting and repair of multifunction peripherals A must-have instructional and reference title for anyone who works with computer peripherals!

Radiation Therapy of Benign Diseases Jul 11 2021 The radiation therapist's primary concern is the treatment of patients with malignant disease. However, there are definite indications for radiation treatment for benign diseases that do not respond to conventional methods of treatment. It may be the treatment of choice in the unusual instance of a life-threatening benign disease that cannot be surgically or medically managed. The present volume by Order and Donaldson represents a major statement on the utilization of radiation techniques in the management of benign disease. The initial report of the Committee on Radiation Treatment of Benign Disease from the Bureau of Radiological Health recommended that consideration be given to the quality of radiation, the total dose, overall time, underlying organs at risk and shielding factors before the institution of radiation therapy. Infants and children should be treated with ionizing radiation only in very exceptional cases and after careful evaluation of the potential risk compared with the expected benefit. Direct irradiation of the skin areas overlying organs that are particularly prone to late effects such as the thyroid, eye, gonads, bone marrow, and breast should be avoided. Meticulous radiation protection techniques should be used in all instances and the depth of penetration of the x-ray beam should be chosen in accordance with depth of the pathologic process'.
