Toolkit for value chain analysis and market development integrating climate resilience and gender responsiveness Feb 11 2021 This toolkit aims to help countries in selecting and analysing value chains for opportunities to improve climate change resilience and reduce gender inequalities. It intends to provide policy makers, planners, project developers, technical advisors and implementers at local, regional or national level with good practices of climate-resilient and gender-responsive value chain development. It aims to act as a repository of relevant tools and methodologies for identifying relevant stakeholders and engaging with them to collect data and analyse it to design interventions. Climate change threatens agricultural value chains, and having a gender-responsive value chain approach is useful in analysing the climate risks, as it looks at stages during and beyond production, while using a more systemic approach to risk management.

Value Chain Analysis Feb 23 2022 Despite fast growth in poultry business, farmers from developing countries suffer several problems: the major one being minimum share of profit. Lack of knowledge of the value chain is one of the major contributing factors. A study was conducted to find out the appropriate way out to enhance the share of poultry growers in the profit. Results showed unorganized marketing system and high/rapid fluctuation in price to be detrimental to producers. Credit was also found to be a constraining factor making the bargaining power weak on part of poultry producers. It is recommended that minimum market price be fixed. Besides, broiler value chain should be upgraded through technology-based processed meat production system to enter into new value chain and trap the maximum benefits. Since, many of the rural poor are dependent on farming policy-makers could find this book important for any efforts to combat poverty through modernization and commercialization of agribusiness. It may be equally important for scholars interested in value chain analysis of poultry business. Grassroots level workers and farmers may also have useful insight, through this book, on poultry farming.

Apple Value Chain analysis Jul 31 2022 Seminar paper from the year 2013 in the subject Business economics - Operations Research, grade: B, Monash University Melbourne, language: English, abstract: Value chain analysis goes a long way in the categorization of the value adding activities in an organization. This aspect is important with the fact that, firms now increasingly look towards the development of their Sustainable Competitive Advantage based on the value addition to the company's output at each level of the company (Kaplinsky & Morris, 2001). As the value chain, as explained later in this paper, encompasses the entire organization- classified as the inputs for the primary and secondary activities, the proper analysis of the same is very crucial to the overall development of the organization and its long term sustainability in this competitive world. The analysis of the value chain of the Apple Inc. showed a very critical aspect in the manufacturing and production sector of the company. This is due to the fact that Apple Inc. does not have any manufacturing facilities to produce the hardware for its products. They, instead rely on the outsourcing of the manufacturing to Chinese corporations. This can be very detrimental to the company in the long run. Another aspect that could be improved is the Human resource aspect that makes a part of the support activity of the value chain. Our recommendations would include to build manufacturing units to buffet the firm from external influences, to make changes in the technology aspect by making the operating system open sourced and to have more robust human resource policies to make it very employee friendly.

Value Chain Analysis of Ginger Sector of Nepal Mar 03 2020 The paradigm shift in marketing from mass production to product customization targeting to satisfy the consumers' interest along with fair and equitable benefit distribution among the actors emerged the value chain approach. This approach is not only limited as a marketing tool but also as a reliable tool for poverty alleviation. In developing countries, agriculture value chain is less competitive because the producer are mostly small, upgrading activities at local level are minimum and there is lack of good governance practices among the chain actors. This manuscript provides greater insights into upgrading and governance structure of agriculture value chain with special focus on MSMEs. It takes the case of Ginger- one of the important spice crops in Nepal- and provides the ways forward to improve the situation of agriculture value chain in developing countries. The author targets this manuscript for the practitioners of value chain development, development agencies, donor communities, professionals of marketing and SME development, researchers and the policy makers

Supply Chain Analysis of H&M May 29 2022 Seminar paper from the year 2019 in the subject Business economics - Supply, Production, Logistics, grade: 1,7, , course: Operations & Supply Chain Management, language: English, abstract: This work provides an insight into the supply chain of H&M. After a brief company introduction the whole structure of H&M's Supply Chain is analyzed in detail. Starting from Bills of Material (BOM) and Bills of Routing (BOR) a Business Scope Diagram is created. This is followed by a detailed Geographic Map where the flows of goods and flows of information are displayed and explained. For better readability in this part an example for the situation in Europe is leveraged. Going further, a comprehensive thread diagram is the result. In this step we can identify problems in the current Supply Chain. Two well-known instruments, namely Balance Score Card (BSC) and Current Reality Tree (CRT) are used for the analysis of the problems. With help of the Future Reality Tree (FRT) we can give recommendations for the future and how current problems of the Supply Chain can be solved.

Value Chain Analysis of Honey Production Nov 30 2019 In order to maintain productivity in the sector and for easy understanding, adopting new technology and all rounded information which in turn enlarges their readiness to produce more and thereby raises honey marketable supply, Wereda agriculture office and other apiculture development partners should give weight to practical supported beekeeping training which focused on pre and post harvest management of honey production and marketing. Establishing honey and beeswax collection centers in potential production areas and equipping them with the necessary facilities; encouraging and supporting the establishment of local-based small scale honey and beeswax processing, packing enterprises, particularly by women and the youth. For flourishing honey exports, creation of an attractive value scheme is important. Therefore, value expectations of the target market need to be known by creating closer relationship with potential buyers and this will help to understand the value demanded

Value Chain Analysis of Groundnut May 17 2021 Academic Paper from the year 2019 in the subject Agrarian Studies, grade: Good, Bahir Dar University (College of Agriculture and Environmental Science), course: Agricultural economics, language: English, abstract: This study was aimed at analyzing value chain of Groundnut in Pawi Woreda, Metekel Zone, Beni-shangul Gumuz Region with specific objectives of identifying groundnut value chain and examining the performance of actors in the chain; analyzing the determinants of groundnut supply to the market in the study area; and identifying and map marketing channels. The data were collected from both primary and secondary sources. The primary data for this study were collected from 155 farmers, 30 traders and 25 consumers through using questionnaires. Descriptive statistics and Econometrics models were used to analyze the collected data. Results show that the main groundnut value chain actors in the study area groundnut producers/farmer, input suppliers, local assembler, wholesalers, retailers, Processers and consumers. It is also found out that groundnut passes through several intermediaries with little value being added before reaching the end users. The chain is governed by wholesalers and Processers who have capital advantage over the other chain actors. Therefore, farmers are forced to capture a lower share of profit margin. The result of OLS regression model indicated that marketable supply is significantly affected by sex of household head, age of household head, agricultural extension service, owner ship of transport facility, distance of the nearest market and quantity of groundnut produced. Therefore, policy aiming at increasing farmers' access to modern inputs, developing and improving infrastructure, gender consideration, and improving extension system are recommended to accelerate the chain's development.

Value Chain Analysis Apr 27 2022 Business collaborations have become complex; hence, the exchange of goods on markets does not always work. The central causes of this are specific customer demands, global sourcing opportunities and non-economic objectives that require a variety of refined cooperation processes. This is why value chains are gaining in importance for companies attempting to deal with these challenges. This book addresses the optimal design of value chains. It identifies problems that affect the overall business environment, information systems, production processes and customer demands. It develops a general simulation model in order to verify the effects of any disruption to the collaborative process and the effectiveness of management measures.

Coffee value chain analysis May 05 2020 This study aims to analyze the coffee value chain in Uganda and identify opportunities and constraints for enhancing youth employment. Coffee is one of the key agricultural commodities in the Government of Uganda's pursuance of sustainable growth and job creation, especially for the rapidly expanding youth population. The study outlines a significant number of job opportunities for young people along this value chain, not only in production but increasingly in processing, trade and marketing, as well as service provision. It also suggests strategic upgrading options and outlines concrete policy actions to maximize youth participation in and benefits from the coffee sub-sector.

The Chinese Education Policy Landscape Aug 08 2020 This book examines the Chinese education policy landscape since 1978 by constructing a policy analysis tool, the "concept-added policy chain," and discusses how to review, assess and forecast the development of that landscape, historically and contextually. In addition, it presents several major historical educational policy shifts in order to explore both the internal and external rationale behind the development of an education policy with Chinese characteristics. It also provides a unique policy analysis tool for investigating the intricate political logics in contemporary Chinese education policy development at the macro-level, systematically and comprehensively.

Supply Chain Analysis Oct 02 2022 This is a carefully developed work focused on the analysis of supply chain interaction issues in emerging markets and industry sectors. It is a leading-edge handbook that will emphasize areas of study where, thus far, little work has been done and where the "rubber meets the road" - the supply chain process, information, and systems integration. These are pertinent issues facing practitioners and researchers in today's business environment. This is a gap-bridging handbook that analyzes interaction issues from both the research and practitioner sides. The result is a volume that examines and provides practical solutions on interaction issues while being firmly grounded in research principles.

Blockchain in the field of food supply chain. Analysis of the technological implementation Dec 12 2020 Seminar paper from the year 2022 in the subject Business economics - Business Management, Corporate Governance, grade: 1,0, University of Applied Sciences Stuttgart, language: English, abstract: This paper deals with the analysis of the technological implementation of blockchain in the field of food supply chain. Blockchain has long been more than just the technology behind the cryptocurrency Bitcoin. Rather, the technology is now considered the real innovation, which experts believe has the potential to change business models, governments, and even societies. Above all, it is increasingly coming to the public's attention because of its many possible applications. Basically, the blockchain is a public register that enables users to collaborate in a trustworthy and transparent manner. The blockchain system connects all participants in a peer-to-peer network, so no intermediaries are required. In addition to the financial sector, supply chain management is also mentioned in various publications as an important application area for the technology. The food supply chain in particular is increasingly coming into focus due to the increasing complexity and internationalisation of supply chains, as well as the demand for transparency on the part of customers against the backdrop of sustainability. The goals of blockchain technology in the food supply chain include optimising the international exchange of goods and its documentation, minimising the need for middlemen, traceability, and real-time localisation of products. Retail giants, such as Walmart and Carrefour, recognised the potential of the technology early on and rely on IBM Food Trust to map their own product portfolio as transparently as possible.
