Dislocations in Solids Sep 08 2020 This volume comprises the Proceedings of the Yamada Conference IX on Dislocations in Solids, held in August 1984

in Tokyo. The purpose of the conference was two-fold: firstly to evaluate the increasing data on basic properties of dislocations and their interaction with other types of defects in solids and, secondly, to increase understanding of the material properties brought about by dislocation-related phenomena. Metals and alloys, semi-conductors and ions crystals were discussed. One of the important points of contention was the electronic state at the core of dislocation.

Another was the dislocation model of amorphous structure. **Official Gazette of the United States Patent Office** Jul 07 2020

The Mystique of Transmission

Feb 11 2021 The Mystique of Transmission is a close reading of a late-eighth-century Chan/Zen Buddhist hagiographical work, the Lidai fabao ji (Record of the Dharma-Jewel Through the Generations), and is its first English translation. The text is the only remaining relic of the little-known Bao Tang Chan school of Sichuan, and combines a sectarian history of Buddhism and Chan in China with an account of the eighth-century Chan master Wuzhu in Sichuan. Chinese religions scholar Wendi Adamek compares the Lidai fabao ji with other sources from the fourth through eighth centuries, chronicling changes in the doctrines and practices involved in transmitting medieval Chinese Buddhist teachings. While Adamek is concerned with familiar Chan themes like patriarchal genealogies and the ideology of sudden enlightenment, she also highlights topics that make Lidai fabao ji distinctive: formless practice, the inclusion of female practitioners, the influence of Daoist metaphysics, and connections with early Tibetan Buddhism. The Lidai fabao ji was unearthed in the early twentieth century in the Mogao caves at the Silk Road oasis of

Dunhuang in northwestern China. Discovery of the Dunhuang manuscripts has been compared with the discovery of the Dead Sea Scrolls, as these documents have radically changed our understanding of medieval China and Buddhism. A crucial volume for students and scholars, The Mystique of Transmission offers a rare glimpse of a lost world and fills an important gap in the timeline of Chinese and Buddhist history.

Spectroscopic Properties of Inorganic and Organometallic Compounds

Mar 15 2021 Reflecting the growing volume of published work in this field, researchers will find this book an invaluable source of information on current methods and applications.

Memory in a Social Context

Jun 05 2020 This book explores new points of view of human memory in the link among mind, brain, and society. Research of human memory traditionally has been in the field of experimental

psychology, and a number of psychological researchers have come upon important findings regarding human memory. They have provided critical theories to explain human memory processes, but this approach is hitting a brick wall. The experimental psychological approach or laboratory-based approach to human memory functions is examined in a very controlled environment, but the evidence obtained from this approach may not necessarily reflect real-life events in our mind. In addition, findings from experimental psychology have often ignored the link with biological structures, or the brain. One solution is a cognitive neuroscience approach, in which functional neuroimaging techniques have enabled us to view how memory processes are represented in the brain. In addition, the new approach extends the traditional concept of human memory into a wider framework by reconsidering memory functions in a social context. These advanced approaches help us to understand how "social memory" is represented in the human brain and is processed in real-life situations. The work reported in this volume is at the forefront of cognitive neuroscience in the research of human memory in a social context and the potential application of memory research. This book will help to motivate young scientists and graduate and undergraduate students in psychology and neuroscience.

Semiconductor Interfaces at the Sub-Nanometer Scale

Jan 25 2022 The Advanced Research Workshop on the Physical Properties of Semiconductor Interfaces at the Sub-Nanometer Scale was held from 31 August to 2 September, 1992, in Riva del Garda, Italy. The aim of the workshop was to bring together experts in different aspects of the study of semiconductor interfaces and in small-scale devices where the interface properties can be very significant It was our aim that this would help focus research of the growth and characterization of semiconductor interfaces at the atomic scale on the issues that will have the greatest impact on devices of the future. Some 30 participants from industrial and academic research institutes and from 11 countries contributed to the workshop with papers on their recent work. . 'There was ample time for discussion after each talk, as well as a summary discussion at the end of the meeting. The major themes of the meeting are described below. The meeting included several talks relating to the different growth techniques used in heteroepitaxial growth
