Where Does All That Food Go? Sep 28 2019 Most of us eat (or incorporate into our bodies) quite a bit of stuff that does not look, act or function even remotely like us. Unless our food mysteriously disappears inside of us, this must mean we change its molecular structure in some way. In fact, we are constantly modifying our molecules through chemical reactions, which together constitute our Metabolism. At any given moment, we transform (metabolize) millions of molecules within our bodies, building new ones, breaking down others, and exchanging them with the world around us. Metabolism is much more than the reason you gain weight when you overeat, it is a process that is so central for life that it defines what a living being is. We will explore what metabolism is, how these chemical reactions that constitute Metabolism are organized and how they are regulated (including the effects of hormones). We will follow the transformations of each type of nutrient (carbohydrates, proteins and lipids) within our bodies and cells, from the mouth, through our intestines and then within the different organs in our body. We will discuss metabolic and evolutionary reasons why so many people today struggle with excessive weight gain, and why some (rarer) people find it hard to gain weight, even when eating large amounts. We will also discuss changes in metabolism with diseases such as diabetes and heart attack, as well as conditions such as exercise and aging.

The Ultimate Pokemon Go Guide Jun 29 2022 Pokemon Go has in a matter of weeks become an internet phenomenon. It made $14 million for its creators since launch, and it's breaking all sorts of records and topping download charts. But why? What is it? How can you get it? Here's the lowdown on everything you need to know about Nintendo and The Pokemon Company's latest smash hit. What's In This Ultimate Pokemon Go Guide? This is a comprehensive guide for Pokemon Go. All of a sudden it's like we've travelled back in time to the mid 1990s. Everybody has Pokemon fever again, and people are quite literally out on the streets catching Pokemon, which is something of a bizarre thing to think about. Topics covered in this guide include... * How to earn XP, level up, join gym teams and more * Getting started and catching Pokemon * Levelling up your trainer and Pokemon * Gyms, Teams and Pokemon battles * Advanced tips and tricks for catching Pokemon * Hatching eggs and finding out which Pokemon are inside * Rewards, XP and unlockable items for every level * How to find rare and legendary Pokemon * Using Incense correctly to catch Pokemon * How to easily tell if there's a problem with the Pokemon server and much more! What's The Craze All About? To break it down to its simplest description, Pokemon Go uses your mobile phone's satellite GPS systems and built-in clock to figure out where and when you are when the game is open. When you've got the game open, the game then populates the world around you with Pokemon. You end up looking at the world through your phone's screen and camera, and Pokemon are dropped onto the top of the real world in a semi-convincing way - this is augmented reality. What happens then is much like the rest of the Pokemon games - you can catch various creatures and do battle with others, training Pokemon and working to 'catch them all' as well as build your strength in battle. The gimmick is that thanks to the GPS and augmented reality, the Pokemon available to you change based on your real-world location and the time of day, so players are encouraged to move around. Real-world locations are even marked as PokeStops and Pokemon Gyms, meaning you have to travel to them if you want the benefits of those locations. It's pretty cool stuff.
